#### Sharaxaad

Sharaxaad:

The **Samsung Galaxy A05 (128GB / 4GB RAM)** is Samsung's "reliable workhorse" for 2024/2025.

#### Key Specifications

- **Display:** 6.7-inch PLS LCD. It's a big, expansive screen, though it is **HD+ (720p)** rather than Full HD, so it's great for YouTube but not as sharp as the S-series.
- **Storage (128GB):** This is the "sweet spot" for this phone. 128GB gives you plenty of room for photos and apps, and you can expand it further via a microSD card.
- **RAM (4GB):** This is enough for everyday multitasking (WhatsApp, TikTok, Chrome). It's not a gaming beast, but it handles the basics smoothly.
- **Processor:** MediaTek Helio G85. A solid budget chip that handles daily tasks with ease.
- **Battery:** 5,000mAh. This is the standout feature—it can easily last **two days** with light use. It also

supports **25W Fast Charging** (though the brick is often sold separately).
